Ferry · Copying 1,248 files

This file is already there

movie_2019.mkv already exists in \\NAS\backup\Film Archive. Which one do you want to keep?

019.mkv
backup\Film Archive
3.61 GB
2 Feb 2023, 18:05

MB bigger. Other files

Replace if newer
Only when the one you're copying was changed more recently.

Replace if the size is different
Same date but a different size usually means it was edited.

Replace if the date is different
Newer or older, as long as the dates don't match.

Replace if size or date is different
The usual choice for keeping a backup up to date.

Replace if the contents are different
Compares the two files. Slower, but catches every change.

Your own rule: replace if any of these differ

☑ Size ☑ Date ☐ Contents Use rule

Tick "Apply to all" first to use the same rule for the other 11 conflicts.

Replace ⌄ | Skip | Keep both

Keep both saves the new one as movie_2019 (2).mkv

What to copy

E:\Photos\2026
4,812 files · 31.2 GB

E:\Photos\Raw 2026
2,104 files · 54.9 GB

+ Add folder + Add files

Or drag folders here

Where to

K:\Backup\Photos

Browse...

✓ K: has 1.21 TB free. Plenty of room for 86.1 GB.

How

- ○ **Copy** — Copies the files. The originals stay where they are.
- ○ **Move** — Copies the files, then removes the originals once each copy is checked.
- ○ **Sync** — Makes the destination match: adds new and changed files. Never deletes anything.
- ◉ **Mirror** — Makes an exact copy: also deletes files in the destination that aren't in the source.

⚠ **Mirror deletes files**

Anything in K:\Backup\Photos that isn't in your sources will be deleted. Right now that's 214 files (3.2 GB). Ferry shows you the full list and asks before deleting anything.

See what would change

Settings

Find a setting

General | Explorer integration | **Speed** | Safety | Notifications

Most people never need to change these.

Copying

Memory used while copying (buffer size)
Ferry moves data in chunks. Auto picks the best chunk size for each drive; bigger isn't always faster.
Auto (recommended)

Run jobs on different drives at the same time
Jobs that don't share a drive run side by side. Jobs that share one wait their turn, so neither slows down.
On

Default speed limit
New copies start with this limit. You can change it per copy.
No limit

While you work

Keep my PC responsive
When you're actively using the PC, Ferry eases off a little so apps stay snappy.
On

What new copies do when something unexpected happens.

Checking

Verify after copy, for new copies
Checks that every copy matches the original. You can still turn it off for a single copy.
On

When something goes wrong

If a file already exists
What to do when a file with the same name is already there.
Ask me

If a file can’t be read
What to do when a file is damaged or locked.
Retry, then skip and list it

How many times to retry
Before giving up on a file and listing it under Problems.
3 times

Send deleted files to the Recycle Bin
Applies to Move and Mirror. Network drives don’t have a Recycle Bin, so Ferry always asks first there.
On

Keep a log of every job
Saved in Documents\Ferry logs and cleared after 30 days.
On

Settings

Tooltip copy

Every ⓘ in Ferry, in one place. Rule: one or two short sentences, say what it does and when you'd want it, no jargon. The same text is used wherever the option appears (copy window, New job, Settings).

Where	Option	Tooltip
Copy window, New job	**Verify after copy**	Reads each copy back and checks it matches the original. Takes a little longer, but you will know nothing got damaged on the way.
Copy window, New job	**Keep dates & attributes**	Copies keep their original "date modified" and settings like read-only or hidden. Turn off if you want them to look brand new.
Copy window, New job	**Skip files already there**	Leaves a file alone if the destination already has one with the same name, size and date. Handy for finishing a copy that got interrupted.
Copy window, New job	**Copy permissions**	Copies who is allowed to open or change each file. Only matters on work or shared PCs; most people can leave this off.
Copy window, New job	**Speed limit**	Slows the copy down on purpose so your PC and network stay quick for other things, like a video call or a game.
Copy window, New job	**When done**	What your PC does once every copy has finished. Pick Sleep or Shut down for big copies you leave running overnight.
Copy window, New job, Settings	**If a file already exists**	What to do when the destination already has a file with the same name. "Overwrite if newer" only replaces older versions.
Copy window, New job, Settings	**If a file can't be read**	What to do when a file is damaged or locked by another app. Retrying fixes most hiccups; anything left over is listed under Problems.
Conflict prompt	**Replace only if newer**	Replaces this file and every other conflict, but only when the file you're copying is newer. Older ones are skipped.
Right-click menu	**Copy here with options…**	Pastes what you copied into this folder, but lets you choose options first, like verifying or skipping files already there.
Right-click menu	**Verify folders match…**	Compares two folders file by file and tells you if anything is missing or different. Nothing is copied or changed.
Right-click menu	**Sync folder to…**	Makes another folder match this one by copying new and changed files. Never deletes anything.
Settings	**Handle copies from Explorer**	Ferry takes over Ctrl+V and drag-and-drop copies in File Explorer. Switch off any time to go back to how Windows normally copies.
Settings	**Let Windows do tiny copies**	Copies smaller than this are left to Windows, because they finish in a blink anyway. Choose "Never" if you want Ferry to handle everything.
Settings	**Buffer size**	How big each chunk of data is when Ferry copies. Leave it on Auto unless a specific drive seems slow.
Settings	**Run jobs on different drives at the same time**	Copying two things from the same drive at once makes both slower. Ferry lines those up and runs the rest together.
Settings	**Keep a log of every job**	A plain text record of what was copied, skipped or failed. Useful if you need to check what happened later.
Settings	**Tell me right away if something needs me**	Shows a notification as soon as a copy is waiting for your answer, so it doesn't sit paused for hours.
Conflict prompt	**Replace ▾ (if newer / size / date / contents)**	Replace only in some cases. "If size or date is different" is the usual choice for keeping a backup up to date; "contents" is slower but catches every change.
Cancel confirmation	**Also delete the files already copied**	Removes everything this copy has put in the destination so far, so it's as if you never started. Files that were there before are not touched.
Settings	**When a copy starts, open**	Pick the small window if you just want to see progress, or the full one if you like checking options before it gets going.
Settings	**Handle moves too**	When you move files, Ferry copies them, checks the copy, and only then removes the originals.
